Managed Multi-Cloud Services

Managed multi-cloud solutions across physical,
virtual and shared environments.

**DIGITAL
SENSE**
An OvertheWire Company

Key Features

Multi-data centre options for redundancy and high availability scenarios

Backed with genuine performance and availability rebates.

Scalability and elasticity to match business organic growth, bursting capabilities or as a temporary migration platform

Security features available including NSX Distributed Firewall and NSX Edge Firewall

VMware features such as vMotion, Storage vMotion and Snapshots all accessible from a management portal

Additional storage features such as storage replication and disk-based snapshots

Management and administration tasks can be managed from an online portal

Fully monitored and managed by a Brisbane-based team with 24/7 customer support

How it works

DSCloud brings together the best enterprise technology providers to create a world-class cloud environment. We are a true cloud-hosting and data centre provider, whether your footprint is physical, virtual or shared. Our DSCloud solution also makes it easy to move in, out and between clouds.

Through our physical rack space and cloud services offering, we can provide complete cloud elasticity with a hybrid cloud approach. Our diverse cloud systems are interconnected to our provider networks enabling true multi-zone high availability.

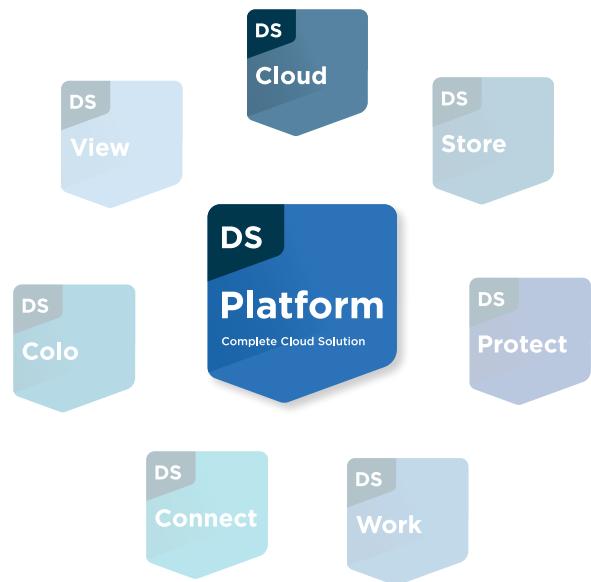

- Choose from a variety of locations and access features such as virtual machine replication, load balancing, remote backups and disaster recovery.
- Agile and scalable infrastructure that aligns cloud with IT infrastructure and business strategy.
- No upfront investment with a simplified, transparent billing process and no hidden fees or charges.
- Move data between your equipment and the cloud through Ethernet (iSCSI, SMB & NFS).
- Choose from public cloud (Digital Sense operated and third-party), private customer environments and customer on-premises.
- Simplicity of architecture and optimised operation, resulting in better commercial operation and lead architecture for customers.
- Pooled resources including CPU, memory, storage and networking for high performance.
- Data stored locally to improve latency.

DSCloud drives business faster with agile, scalable and simple cloud solutions. This secure cloud system aligns with your business needs and infrastructure to create the ultimate virtual environment for your workload.

When it comes to the cloud, we know you need flexibility, reliability and security to ensure your business can continue to deliver for your customers. DSCloud provides a world-class fully managed cloud solution that is always available and delivers the level of performance you expect.

We host and manage the hardware, software, servers, storage, security and associated infrastructure to allow you to consume resources on demand. All virtual workloads can be configured to your specific requirements and budget and aligned to your existing IT infrastructure. This allows you to leverage cloud services while protecting your investment in existing technologies, training and in-house technical expertise.

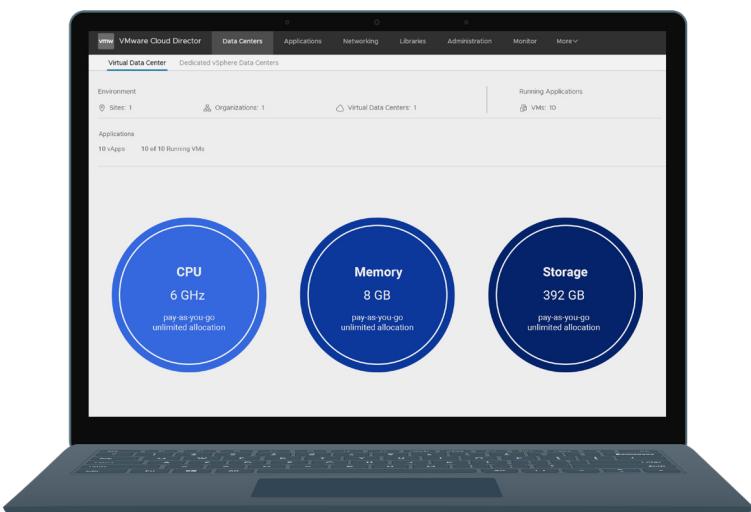

It's all part of our goal to provide you with a simple, seamless cloud experience that allows you to move services freely into and out of the cloud. With your cloud solution managed by our local cloud success team, you will be free to focus on growing your business. Don't just move to the cloud - power up your business with DSCloud.

the power of the cloud.**

DSCloud Public

Shared Cloud Hosting

Scalable, cost-effective solutions based on VMware's cloud platform, DSCloud Public provides more competitive pricing, across shared cloud resources, all securely isolated and fully managed to ensure that other tenants do not impact performance or security.

DSCloud Public can be tailored to suit government, commercial and public sector clients with a secure multi-tenancy cloud solution. The platform aligns with all government requirements for compliance and security and is suitable for all sensitive data storage classifications (official to protected).

DSCloud Dedicated

Dedicated Private Cloud Hosting

DSCloud Dedicated is perfect for customers who need underlying resources such as servers, but the management component can be shared with other tenants. This is ideal for customers with specific security or performance requirements and those who are unable to leverage public cloud resources. DSCloud Dedicated is hosted either on customer premises or collocated in Digital Sense facilities.

DSCloud Private

Private Cloud Hosting

With DSCloud Private you will have your own dedicated consumption and shared management. With this solution, you get the luxury of the private cloud and dedicated resources with cost savings from shared management expenses.

DSCloud provides a world-class fully managed cloud solution that is always available and delivers the level of performance you expect.
