# DS Protect

Data Protection as-a-Service

---

Protect your most valuable asset, your data, with a solution that aligns with your business needs.

**DIGITAL  
SENSE**

An OvertheWire Company 

# DSProtect is your ultimate insurance policy for data protection as-a-service.

This robust system is designed to protect your critical business systems and data, ensuring you can get back to business as usual quickly if a breach does occur.

For most businesses, the true value of data protection is never realised until an outage or breach occurs. With DSProtect, you can rest assured that your data and business systems are fully protected and can be quickly reinstated to full functionality.

How long would it take your business to return to normal operation if you lost access to systems, apps and data? What impact would one, three or even five days of not being able to transact with customers have on your bottom line, your brand, or your relationship with suppliers and customers?

This is a reality that many businesses face. Cyber-attacks, outages and data loss are a daily occurrence for organisations around the globe, and it's critical that businesses protect themselves.

DSProtect has been designed to offer the highest level of security, back-up functionality and portability to enable business continuity and disaster recovery should a breach or outage occur.

## Key Features

Complete data protection as-a-service on a pay-per-month, pay as you use model

Multiple data protection periods, ranging from 14 days to 7 years

Compliance with corporate frameworks for data storage, protection and integrity

Rapid recovery for apps and services

Data retrieval on demand to meet compliance and legal discovery requirements

24/7 support with locally based team and self-service access for power users

Easily scale data protection requirements up or down

Peace of mind knowing that your data is protected with industry-leading SLAs

Store backup data in the short-term for fast recovery, or long-term for compliance with extended data retention rules

# How it works

DSProtect is a fully integrated hardware and software solution that delivers world-class data protection, business continuity and disaster recovery. We tailor the platform to your exact requirements and map the solution to your SLA, so you can meet your compliance, governance and reporting obligations.

This cutting-edge system is designed to protect your data against loss or breach, as well ensure maximum uptime and fast recovery when you need it most. We're serious about data protection and our team is constantly assessing new security threats and the latest technology to add new features to the platform.

- Securely back-up all of your data, aligned to your existing IT automation and cloud infrastructure.
- Leverage automation through ServiceNow integration.
- Reduce the risk of data breaches and cyber-attacks with role-based access control, multi-factor authentication and single sign-on compatibility.
- Data encryption at rest and when data is in flight.
- Data immutability to protect against data loss or manipulation, including viruses, ransomware, bugs or sabotage.

*This cutting-edge system is designed to protect your data against loss or breach, as well ensure maximum uptime and fast recovery.*

## About Digital Sense

At Digital Sense, we focus on helping our customers reach their commercial goals by harnessing the power of the cloud.
